WONDERFULLY JOSKO

WINDOWS

3 design lines. 3 materials. 8 product lines.
With our windows, no living dreams remain unfulfilled.

INTERIOR DOORS

Josko interior doors are available in a wide range of variants – from modern flush to classically rebated.

ALL GLASS SYSTEMS

5 all-glass systems in 3 materials bring openness to your life and expand your living horizon.

NATURAL WOOD FLOORING BY TRAPA

High-quality natural wood floors manufactured according to ecological principles and harmoniously matched to all our products.

ENTRANCE DOORS

In 4 materials and over 90 models, our entrance doors ensure that you look forward to coming home.

SUN SHADING

Elegant, integrative sun protection solutions such as our Venetian blinds and roller shutters cool during the day and protect at night.

Our perfectly matched solutions

ONE-STOP SERVICE

Lots of product groups. A consultant. This way you save on valuable time and unnecessary clarifications. And because with us everything comes from a single source, everything is coordinated with everything else.

Mix your home – as you wish.

UNLIMITED COMBINATION WITH SYSTEM

What distinguishes us from other window manufacturers after all? A question, to which there are many convincing answers: For example, our clear commitment to an uncompromising quality. Or our design solutions that have been distinguished with several awards.

One of the most important answers, however, has to do with our sophisticated philosophy, which we call the Smart Mix.

It allows for an individual and smart mixing of your Josko products in your home: You select your style for the windows, doors, natural wood flooring and accessories – and our Smart Mix

System ensures that everything is coordinated with everything else down to the smallest detail, coordinated in terms of colours, surfaces, structures and overall appearance.

And because with us everything comes from a single source you can not only combine look, colours and surfaces to your personal Smart Mix, but also different materials such as wood, plastic and aluminium.

In addition, our Smart Mix is also economical: Because with the almost unlimited Mix options you can optimally fit your wishes to your budget – or even fit your budget to your wishes.

MATERIAL MIX

COMBINE BUDGET-OPTIMISED

You like the elegant look of the genuine wood, but you would also like to keep an eye on your budget when planning for your home? Our multifaceted system philosophy provides you with particularly clever support. Thus, you can combine various materials such as wood/aluminium and plastic/aluminium with each other. The uniform outer look is nevertheless maintained.

DESIGN MIX

EVERYTHING FITS TOGETHER

Depending on the place of use and taste, you can choose from windows, patio doors, fixed units and sliding doors within a product line. All elements have the same design signature and shape.

Interior door

Windows

Sliding door

ACCESSORY MIX

UNIFORM ACCESSORIES

Genuine perfection shows itself in the perfect attention to details. With our uniform handle series for windows, sliding doors, entrance and interior doors you are able to put the finishing touches on coordinating your personal living concept.

When diversity becomes unity.

LIVING IN HARMONY

Many colours provide your home with colour harmony – for a harmonious homely feeling.

Smart Mix. Convincing living harmony that can be experienced in every detail.

”

When we develop products and services, we always keep people and their housing needs in mind.

JOHANN SCHEURINGER, CEO

White Heaven

Beach

Pearl Grey

We live wood in every fibre.

The way carefully selected wood is combined to create a healthy living harmony is our declaration of love to Mother Nature. From trunks, from amazement, from having to being. wood. Timeless vibrancy. At first only roughly cut, then carefully stored and dried, carefully treated with respect by our experts in each individual work step.

That Josko, as a manufacturer of windows and doors, is also proudly in 3rd place for interior doors in Austria. We know how much the veneer quality from solid wood determines the value of the door leaves. However, only a few know that, where possible, all doors in a house are made from one trunk in order to create the purest harmony in the home.

No perfect end product without the best raw materials. Who saves on wood, saves in the wrong place. That's what our decades of experience has shown. When we tell our guests that our German nut, oak, spruce and larch wood comes from sustainable forestry and from controlled, certified Central European forests.

And then we have the Smart Mix. Introduced in 2000 with regard to the material-independent design of the exterior façade and expanded in 2014 with the uniform design of many wood colours in the interior. Oiled and brushed according to the Josko process, windows, entrance doors, interior doors and natural wood floors are kept in the same colour and radiate a harmonious ensemble.

It is not surprising that we have been the market leader for wood/aluminium windows in Austria for 21 years.

Tip

More interesting know-how about wood and the responsible use of this raw material in the new Josko Echt magazine. Request now free of charge at josko.com

Spruce, oak, larch and German walnut come exclusively from **Central Europe.**

Solid wood veneer quality determines the high quality of the interior doors. On request, all doors in the house can be made from a single trunk.

*No. 1 for wood/aluminium windows by sales according to BRÄUNLICH-RADAR.com Marktanalyse GmbH Survey 2021.

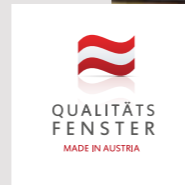

No.1

21 years market leader for wood/aluminium windows in Austria and No.1 in Germany in 2021.*

Responsibility for the future

BECAUSE SUSTAINABLE PRODUCTION ALSO MEANS RESOURCE-EFFICIENT PRODUCTION.

All **residual materials** in the manufacturing process are recycled so that they can be recycled or returned to the production cycle. Anything that cannot be used ends up in our in-house biomass power plant and supplies us with energy.

Resource-friendly production, **100% in Austria** with continuous investments in environmental protection and sustainability.

in-house biomass power plant

All woods used come from **sustainable and certified forestry.**

Where tradition meets the modern.

RENOVATE WITH JOSKO – BECAUSE COST-EFFECTIVENESS CAN BE SO NICE.

It does not always have to be a new building: Today, renovating and addition and extension as a particularly sustainable and encouraged form of construction is becoming ever more popular. Since in many cases it is worth saving valuable existing construction material or the creative combination of old and new is twice as worthwhile in terms of architecture and economy. Requirements for this purpose is a sophisticated refurbishing concept and most of all the choice of suitable products. As during the renovation of old buildings you might come across some surprises or even special wishes that require tailor-made special solutions.

Individual challenges especially arouse our ambition at Josko, that's why we can offer you custom-made products for many products and of course for windows and all-glass systems as well.

By the way: A renovation with thermally optimal Josko windows makes your home not only more beautiful, but also lowers the running operating costs.

TIP

With the selection of the correct window and its alignment you will gain more energy than you lose over the year.

-  Beauty
-  Living comfort
-  Protection
-  Responsibility
-  Costs
-  Funding

The desire for brightness, transparency and lightness of the sense of space has never been greater.

RENOVATE WITH STYLE & EFFICIENCY: WHAT MATTERS WHEN IT COMES TO YOUR NEW WINDOWS

1. **Is it also important to change windows when insulating façades?**
Absolutely! The windows are thermally the weakest point in the house, the heat loss can be up to 25%! If the old windows remain in the new façade, the energy saving effect is severely impaired.
2. **Can new windows be too tight?**
By no means! Windows and façades must form as tight a unit as possible, the air exchange takes place via rule, controlled ventilation. Our products meet the requirements of the highest tightness classes.
3. **How important is sun protection for new windows?**
Very important! As significant as the solar energy gain in large glass areas is in winter, this effect is dangerous in summer. Sun protection solutions are ideal, as they let as much light as possible through, but shield the heat.
4. **What is the advantage of triple instead of double glasses?**
Triple glasses provide a cozy feeling of well-being because they radiate much less cold. With the right orientation and dimensions, they can gain more energy than they lose over the year.

Tailor made added-value Service for every phase of your project

RELIABLE PROJECT SUPPORT AND LONG-TERM PRESERVATION OF YOUR QUALITY OF LIFE

For most people their home is a life's dream which is associated with large investments and heart and soul. Such a project requires good planning and quality execution. It is nice that you can rely on a trustworthy partner and experts for this. We are convinced that windows and doors are the most important elements of a living space in terms of function and architecture, which have an enormous influence on your quality of life.

We do not see ourselves only as simple manufacturer of beautiful and high-quality windows and doors, but rather as provider

of total solutions with corresponding services. Because our Premium products deserve special care and know-how in order to ensure the long-term value retention and quality of life in your beautiful, unique home.

Select from 3 Joskomplett options Standards, Plus and Premium. The higher the upgrade the more solutions, longer Guarantee Periods and cost-security you enjoy in the future.

You can obtain details, conditions and prices from your Josko Consultant.

INFO

You can find your contact person at josko.com

EXPERT ADVICE AND PROJECT SUPPORT

As housing guide, we inspire to convince with our feel for aesthetics and design and provide valuable input during the planning phase on suitability for everyday use. Of course tailor-made to your ideas and concept and for which we devote sufficient time. In addition, at your request we can take over the technical coordination with architects, builders and other works.

ADVANCE PAYMENT GUARANTEE

This way your money is twice as safe, because you can not only trust the stability of the family business, but also the security of a large Austrian bank.

MANUFACTURER INSTALLATION SATISFACTION GUARANTEE

With this unique installation satisfaction guarantee we as manufacture guarantee that our partners work to your complete satisfaction. We are at your side in case of a defect.

INITIAL ADJUSTMENT SERVICE

The window and door fittings work hard each day, because a heavy weight is exerted on the pivot points when opening and closing. That is why we provide your premium products with an initial adjustment service after the installation around the delivery date so that every element fits perfectly.

REGULAR MAINTENANCE SERVICE WITH EXPANDED PRODUCT GUARANTEE

Windows and doors are long-term investments. They are opened and closed day after day. To ensure that they remain optimally adjusted and functional for a long time we carry out regular maintenance service in the first few years. Thus, the guarantee for fittings and electronic components are extended to up to 10 years.

CLASSIC

ATTENTION TO DETAIL. THIS IS WHAT MAKES OUR WINDOWS SO EXTRAORDINARY.

Our windows warm your heart not only because of the top heat – values. We love details and the functional, slim design variety. Let yourself be inspired on the following pages.

SOUND INSULATION

The tightness of the windows influences the sound insulation significantly. As standard, our windows are equipped with triple glazing and 3 seals and thus achieve up to 47 dB sound insulation.

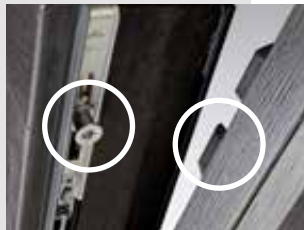

EASY TO CLEAN

Lying windows are trendy now, but most are difficult to clean. The solution: Tilting windows with easy cleaning – effortlessly open and clean the outer side of the windows.

ENERGY EFFICIENT GLASS SPACERS

Thanks to the composite material of black plastic and stainless steel, the Twinspacer creates a significant thermal improvement compared to conventional stainless steel spacers.

BURGLARY PROTECTION

All our windows are secured by several security fittings, that make the lifting of the window sashes more difficult. Increased security is offered by Quadro Safe, SH-1 and RC2. Enquire with your Josko Partner.

SIMPLE FORM

The concealed fitting not only gives the windows their simple shape, but also keeps the open window in the desired position thanks to the integrated turn restrictor.

BURGLARY PROTECTION AND VENTILATION

The increased burglar resistance RC2 is now also possible with tilted windows.

When **two**
worlds become
a way of life.

WONDERFULLY JOSKO

Architect: Gassner & Zarecky
Photos: Sabine Bungert

“Elegance, high quality material, professional installation of the products – this is what distinguishes Josko.”

ANJA KLEINHANS

The frameless all-glass architecture impresses with its manual precision and together with our FixFrame System offers a unique freedom of design without having to compromise on structure, tightness and thermal insulation.

TIP

Plan the sun protection for large glass surfaces right from the start. Then make sure that the sun protection elements fit the windows perfectly and that the temperatures remain pleasantly cool even in the summer months.

The interplay between inside and outside is a central element of the architecture of this single-family house. The combination of living space and nature is perfected in Josko systems. Keeping the inside and outside flowing – an architectural challenge that the Kleinhans family, in collaboration with the architectural firm Gassner & Zarecky, confidently took on when planning their detached family home near Munich. In order to create an interface between the natural landscape and modern architecture, the conventional was courageously pushed aside. The FixFrame frameless system from Josko does the rest and underscores the consistently progressive design. The seamless combination with opening sashes such as windows and/or lift-and-slide doors perfects the coherent overall picture.

“Finding the right window solution played a crucial role in the planning from the start. It should be frameless, be as little bulky as possible and allow a thresholdless exit to the outside. With the FixFrame system from Josko, these wishes could be realised,” emphasizes builder and interior designer Anja Kleinhans.

The flush-fitting wood/aluminium Platin windows were therefore chosen in matt black on the inside and outside for a uniform appearance and harmonious living space. For this reason, the entrance doors and side doors in the outdoor area should also have the same design and the same surface. We opted for the Well.Come Nevos Alu, which achieves a sensational thermal value and convinces with its look, since it is available in a variety of versions and wood or Alu surfaces. The floor-to-ceiling white doors and sliding doors of the product line MET are the counterpart on the inside. Thanks to the patented wall-fitting frame system, these visually blend with the wall.

“It was also important in the sense of the coherent overall concept for the door handles to be realised in the colour of the door and also have the same shape as the window handles if possible. Josko was able to offer these details, which are important to me,” says the owner enthusiastically about the broad product range. The gigantic window front is completed by the Easy Raffstore sun protection system, which, with its infinitely adjustable slats, ensures efficient shading with every incidence of light. Because design standards and the feel-good factor should not be mutually exclusive. Good design invites you to relax,” says Anja Kleinhans, thereby also confirming Josko’s philosophy. After all, that’s what it’s all about when you create a home. A place that provides security and comfort. Today, tomorrow and in the future.

The harmonious overall statement of architecture and interior creates a seemingly natural connection between inside and outside in the light-flooded living space of the Kleinhans family. The FixFrame all-glass system by Josko mediates between the two worlds, and its understated elegance underscores the high design standards of the building.

When you have
a choice with your
all-glass systems.

DESIGN LINE AVANTGARDE

When every day starts with astonishment and the eye can never see enough. When openness inspires our lives.
When the high demands are exceeded and we fall in love with innovative design at first glance.
Then this is: Beautiful Josko. With exceptional windows and all-glass systems that expand the living horizon.

JOSKO PRODUCT DIVERSITY

World premier **ONE** by Josko

Design line
Avantgarde

THE REVOLUTION IN WINDOW DESIGN

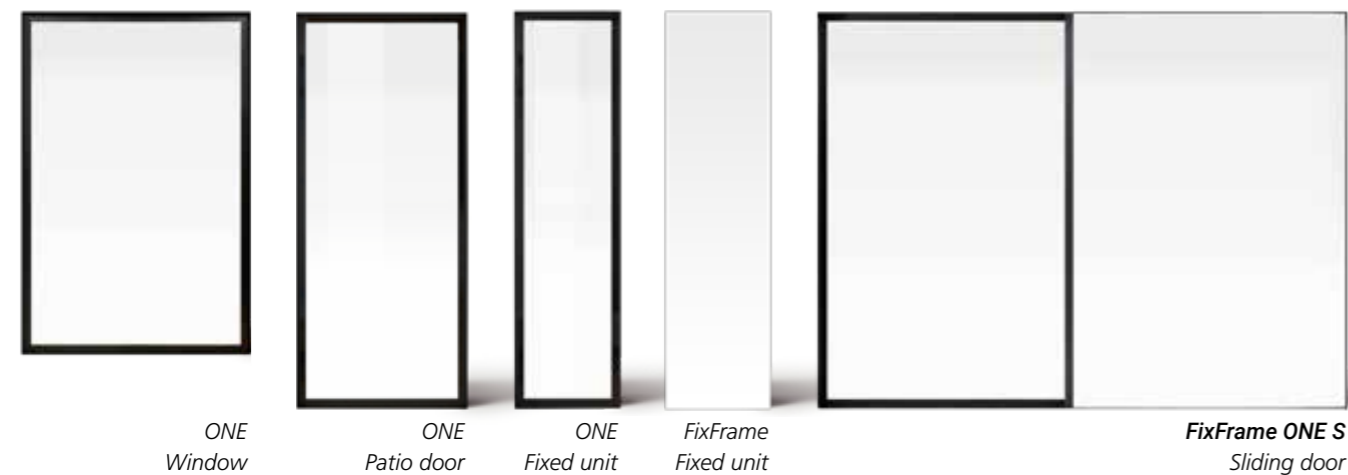

World's first complete system for windows and sliding doors – uncompromisingly slim and symmetrical.

With ONE we set new standards in window design: Inspired by the elegantly simple look of a picture frame, equally slim on all four sides and fascinatingly simple with only 5 cm wide frame look. And this with all elements and opening variations such as windows, terrace doors, Fixed Part, sliding doors and turn-tilt windows. ONE embodies the consistently sophisticated spearhead of our system philosophy and is

available in two surface variations: In puristic aluminium and as App-Version with elegant surface applications. On the outside, both variants are completely identical and can thus be ideally combined. The ONE can just as simply be combined with our frameless FixFrame-System – for who has said that revolution must be complicated?

Videolink at
www.josko.at/vision

NEW!

Our ONE windows now also available as sliding window. A particularly space saving solution.

Photos: Florian Stöllinger, Roland Wimmer

ONE by Josko **Complete system**

DESIGN FROM A SINGLE SOURCE

ONE by Josko is perfectly coordinated.

ONE by Josko is a complete system, optimally coordinated in every detail, in which every element is a part of a whole in a well thought-out manner. Windows, doors, frames, handles – all works like from one mould, and discrete insect screen and sun shade fit harmoniously in the overall concept.

Patio door ONE App with matching Josko natural wood floor, both in oak N06 silver grey

Window ONE with running all-round symmetry – inside and outside

Sliding door FixFrame ONE App S frameless in combination with Venetian blind "Easy"

Skirting board with flush wall termination

Window handle ONE FE with rectangular rosette for ONE App

MINIMALISTICALLY SLIM

ONE is unlike any other window and sliding door system. It combines the narrow and elegant window frames of earlier epochs with the technical achievements of the modern. With its innovative concept, ONE inspires the experts and advances to the forefront of today's window technology.

There was a time when window frames were slim and the windows were subordinate to the façade. Then came the insulating glass age with ever better thermal insulation ratings, ever thicker glass packages – and ever wider window frames. Today begins a new era with ONE by Josko. ONE has brought back the slim elegance of the windows: with modern triple glazing and thermal insulation ratings, which are suitable for

passive homes – but with the minimal frame view of earlier architectural epochs. This is the end of the period when the design of windows and doors had to subordinate to the function and the frame widths of windows, sliding doors and fixed units were different. ONE by Josko means: A uniform, slim design of windows, sliding doors, fixed units and insect screen, regardless of the type of opening.

ONE
by JOSKO

ONE App window with sublight

Sliding door FixFrame ONE App S frameless

Photos: Florian Stöllinger

LESS IS MORE

Barely 3 fingers wide – only 5 cm visible sash width

A novel window and sliding door system with extremely narrow frame: only 5 cm – on all four sides and in all elements. ONE by Josko convinces with a purist design reduced to the essentials: Less is more.

UNCOMPROMISINGLY SYMMETRICAL

ONE
by JOSKO

Why windows have never been symmetrical until now.

Have you ever noticed that windows in the view are always asymmetrical? Almost all windows and doors are plastered on the side and top – but not below. The more is plastered – keyword: narrow frame widths – the larger the difference and thus the asymmetry.

ONE by Josko: The rebirth of symmetry.

The ONE has solved this problem, the interior looks like a picture frame – the same width all around and symmetrical.

This symmetry can also be found in the external view, provided you opt for the specially designed window sill designed for this purpose.

ONE is always symmetrical.

1. All-round symmetry.
From inside and outside.
Top, bottom, left, right.

2. Symmetry with multi-part elements
and different opening type.

3. Deep symmetry
The glass elements are inserted in the centre of the window frames – this creates a homogeneous appearance inside and outside across all opening types.

ONE App patio door

ALL-ROUND SYMMETRY

A WINDOW SILL WITH A SENSE OF SYMMETRY.

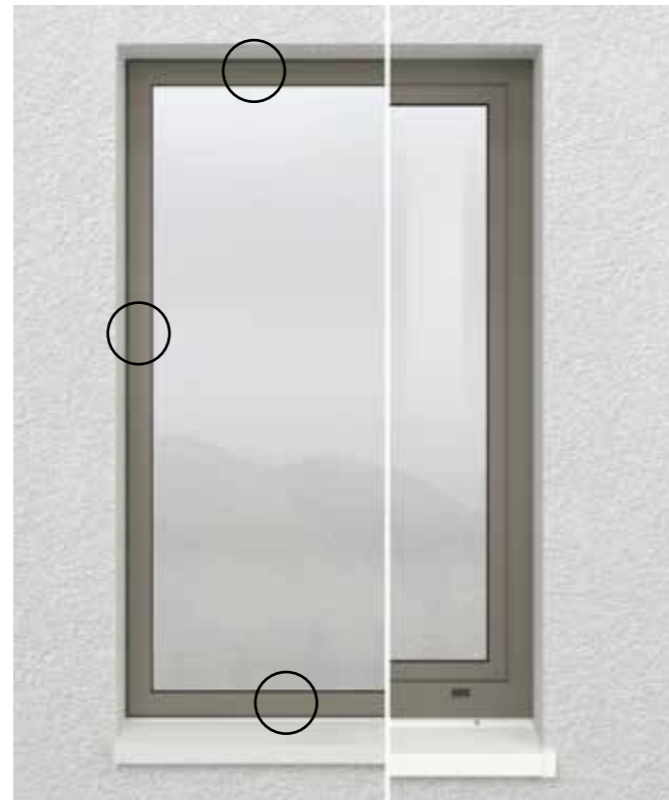

The designer window sill maintains the symmetry of the ONE and fascinates at first glance. It maintains not only the all-round equally slim frame look of the ONE, but also highlights the symmetry.

The designer window sill is cleverly thought-out and is an integral component of the window. Both form a coherent unity – a symmetrical overall composition of timelessly simple elegance.

ONE in comparison.

All-round symmetrical view on all 4 sides.

ONE by Josko
 - Only 5 cm width view width, barely 3 fingers wide
 - Symmetrical on all four sides

Conventional window
 - With dominant broad frame
 - Not symmetrical: The more floor plastered, the more asymmetrical the view. Below, the window frame remains wide.

Design window unit ALU, DS2 – no visible screw connection to the window frame.

SYMMETRY WITH MULTIPARTED ELEMENTS

SYMMETRICAL PICTURE FRAME LOOK EVEN WITH MULTI-PART ELEMENTS.

The continuous, slim symmetry of ONE is also evident in multi-part window and door elements. The view width of the middle section is only 11 cm – just over a hand's width. The picture frame optics typical for ONE are preserved: The dividing joint is exactly in the middle.

Each sash with different functions (such as tilt-turn window and fixed units) is completely symmetrical and can be arranged side by side or on top of each other. The slim and all-round symmetrical frame look always stays the same. From inside and outside. One system, one look.

ONE in comparison.

Fixed unit and turn-tilt sash in one design.

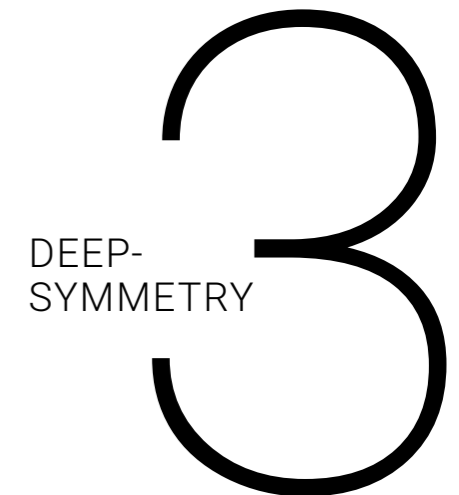

ONE by Josko
 - Fixed unit and openable part with the same frame width and the same glass – inside and outside

Conventional window
 - Fixed unit and openable part are in no respect symmetrical

SYMMETRICAL PICTURE FRAME LOOK EVEN WITH PART-PART ELEMENTS.

Unlike the conventional In addition, with ONE there is no intersection of glass levels between openable elements and fixed parts. In addition, ONE has only a very small recess to the glass outside and inside. An aesthetic solution across the board.

DEEP-SYMMETRY

www.josko.one

DIVERSITY FOR EVERY STYLE

Minimalist design in all its diversity. As purist as the ONE concept is, so numerous are its possibilities. Since with ONE the function of the window does not determine the material, but the architecture and the individual style: The personal taste decides.

With ONE you have 2 product lines to choose from:

1. ONE Alu
slim outside and inside in aluminium

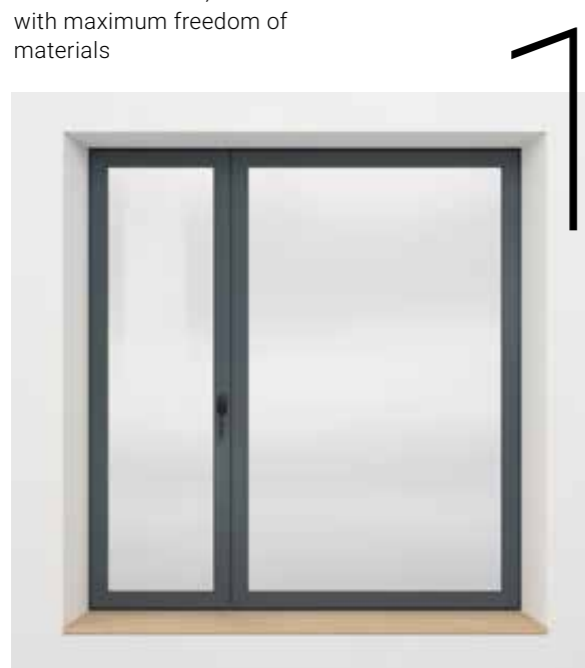

2. ONE App
outside aluminium, inside with maximum freedom of materials

Photo: Florian Stöllinger

Architect: X3 Architect Dipl. Ing. Markus Steffelbauer

ONE Alu
Outside and inside in fine aluminium.

ONE App
Exterior in aluminium, inside with various material applications, which can be colour-matched to the inner window sill in the "wood" version. In Figure: Oak beach N08.

ONE ALU

Clear and purist in aluminium.

Simple and elegant in design, the ONE Alu is available in three attractive interior colours: RAL 9005 deep black matt, RAL 7016 anthracite grey matt and RAL 9016 white matt. Upon request, you can also choose from a wide range of colours. Outside and inside the ONE is available in many RAL, effect colours, powder coated or anodised.

NEW!

Even greater choice of colours are available for the inside!

RAL 9005 deep black matt

RAL 7016 anthracite grey matt

RAL 9016 white matt

ONE APP

The freedom in choice of material and style.

For decades, you could choose only between wood, PVC or aluminium for windows. With ONE App, new opportunities are opening up. ONE's revolutionary App technology delights with beautiful surface applications for maximum impact.

First the window, then the App.

ONE App also offers quite practical benefits: Thus, the decision for the individual indoor application is also possible upon request only after installing the windows. Damage to the application due to dirt, building moisture and construction work is avoided. The App is only applied at the end.

ONE in comparison. Interior view of the turn-tilt window.

ONE APP
Inside with maximum freedom in choice of material

Conventional aluminium window
Inside only available in aluminium

Sliding door ONE app Real steel

New innovative materials.

In addition to the elegant and proven Josko wood surfaces in wild oak, oak, spruce, larch, steel, genuine glass, brushed and finely ground aluminium, Art concrete and genuine walnut are also possible with

the ONE App. This allows ONE App to be tailored to almost every life style- individually to every home, matching to the respective architecture. For those seeking the exceptional.

WONDERFULLY JOSKO

DESIGN LINE MODERN

When the natural sense of living has no limits and the transitions between outside and inside are fluid.
When nature always surrounds us and we can really relax where all the senses feel good.
When we can experience the freedom of our own four walls in their most beautiful form. Then this is: Beautiful Josko.
With windows and all-glass systems that can be combined in many ways.

JOSKO PRODUCT DIVERSITY

Exceptionally beautiful windows.

Design line
Modern

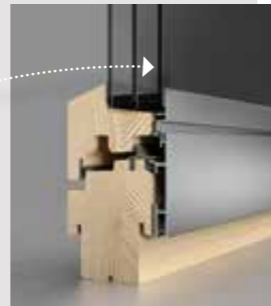

FLUSH FINISH

The windows of the design line Modern are flush-mounted on the outside – window frame, window frame and glass pane are in one level. Mainly with multi-part elements this brings a visual advantage.

TIP

BUILD ON A BUDGET

Save money and combine wood/Alu and plastic/Alu window on your house.

TRIPLE GLAZING

The standard triple glazing ensures the best thermal value.

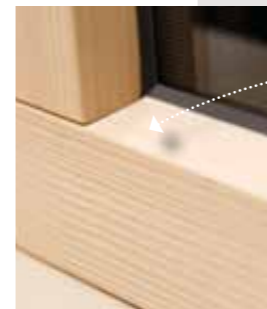

EASY TO CLEAN

The flush-fitting of the window frames with the glass panel ensures quick cleanliness.

WINDOWS MODERN

MODERN WINDOWS, TERRACE DOORS, LIFT-AND-SLIDE DOORS AND ALL-GLASS SYSTEMS

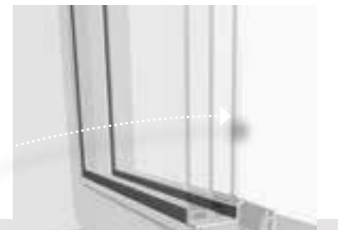

MORE LIGHT

The slightly sloping shape of the window frame allows more light into the house.

TIP

The modern windows are available in many lacquered, glazed, oiled and hand-oiled wood colours as well as with trendy decorative films.

DOUBLE GLASS BONDING

Guarantees better burglar resistance, stability, tightness, greater thermal and sound protection and increased longevity.

SIMPLE FORM

The concealed fitting not only gives the windows their simple shape, but keeps the open window in the desired angle thanks to the integrated turn restrictor.

3 Product lines.
One Look.

SMART MIX

3 product lines. Outside one look, thanks to the uniform Alu shell. Inside wood or PVC.

WINDOWS MODERN

Platin

OUTSIDE AND INSIDE FLUSH AND SLIM

Design line
Modern

WOOD IS NOT JUST WOOD
Sustainable means honest. The inner workings of our wooden frames are made of genuine, consistent solid wood, which is not taken for granted.

MORE LIGHT
Thanks to the bevelled shape, the frames look even slimmer and allow more light into the room. This is particularly advantageous for double or multi-sash windows.

ATTENTION TO DETAIL
Our success window Platin with its unique frame shape ensures more light. The standard triple glazing with optimal thermal protection as well as the processing from sustainable wood make the trend setter on the window market even more energy efficient.

58

59

The most successful wood/
Alu windows Austria and
Germany.

**FLUSH-MOUNTED ON THE OUTSIDE FRAME
FLUSH-FITTING ON THE INSIDE**

The product line Platin is not only glass and frame flush-fitting on the outside, but also frame flush-fitting on the inside for an even more simple look.

EXCELLENT SUSTAINABILITY

The Minergie Award confirms that our platin window has particularly good properties in terms of thermal insulation, tightness and sound insulation, while at the same time offering good value for money.

PLATIN
Best value:
U_w 0.74 W/m²K
System depth: 82 mm

PLATIN PLUS
Best value:
U_w 0.71 W/m²K
System depth: 103 mm

Josko: consistent wood grain thanks to unique gluing technology

CONSISTENT WOOD GRAIN

The wooden frames of our windows are glued several times to avoid warping. We have developed a unique gluing technique for a beautiful and simple look and a consistent wood structure.

industry-standard gluing

BEAUTIFUL LIVING. NICE VENTILATION

New, full-surface wooden sashes now also create an efficient, secure and visually attractive ventilation solution; a missing element in the architectural trend of large-area aluminium cladding on the façade.

Lift-and-slide door Platin Blue

LIFT-AND-SLIDE DOOR PLATIN BLUE

The Platin Blue lift-and-slide door catches the eye with its simple, slim frames and flush glass look. As a wood/aluminium door, it offers the cosiness of solid wood on the inside and the protection of aluminium on the outside.

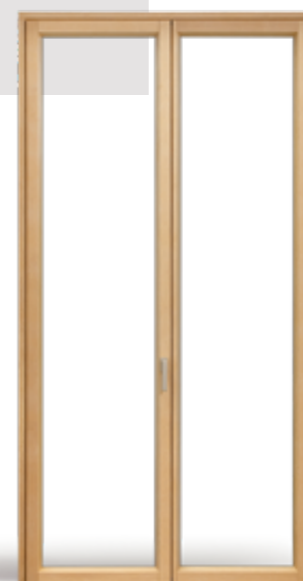

TERRACE DOORS OF THE PRODUCT LINE PLATIN

PLATIN PATIO DOOR

The terrace door Platin impresses with its simple, slim frames and flush glass look.

TIP

LARGE DIMENSIONS
Patio doors available up to a max. height of 3 metres.

Patio door Platin inside,
Oak N03 natural

Terrace door Platin Blue

LIFT-AND-SLIDE DOORS OF THE PRODUCT LINE PLATIN

HARMONISES WITH MANY SYSTEMS

Fits ideally with all of our windows and all-glass systems of the design line Modern.

REDUCED COLD RADIATION.

The triple glazing and the frame made of solid wood reduce the cold radiation.

UG 0.5 AS STANDARD

Platin Blue by Josko is produced with triple glazing Ug 0.5 as standard (compared to competitors who often provide Ug 0.6).

BARRIER-FREE

The barrier-free floor threshold without tripping hazard can be combined with insect screen-sliding frames upon request.

SLIM GUIDE RAIL

The guide rail of our lift-and-slide door is hidden in the upper frame and does not disturb the unobstructed view in the Fixed Part area.

NEW! PULL HANDLE SWIVEL-MOUNTED

Just as practical as aesthetic is our own developed, swivelling handle ZG 9. So slim and flat that it can easily fit under an insect screen-sliding frames.

PULL HANDLE

Conventional pull handle ZG3 for terrace doors. Also suitable for insect screens-rotating frames.

BARRIER-FREE

The barrier-free floor threshold with 20 or 30 mm height withstands even the most adverse weather conditions – matching the outer colour of the doors – available in many colours.

BEAUTIFUL STAINLESS STEEL HINGES

High-quality stainless steel hinges for high and heavy door sashes. Also available in black.

FixFrame Platin

WOOD/ALU ALL-GLASS SYSTEM

FRAMELESS
ALL-GLASS
ARCHITECTURE
THAT SETS
STANDARDS.

MANY INNOVATIVE ADVANTAGES:

DRAINAGE CHANNEL

To drain large volumes of water quickly and reliably. Functional and beautiful.

BARRIER-FREE

With a simple structure. Available in many different colours.

DESIGN WINDOW SILL

Exclusively from us. The innovative window sill without visible fastening screws is significantly lower than others. This does not detract from the tightness.

CONCEALED CABLE GUIDANCE & INSECT SCREEN SLIDING FRAME

Running upwards the first time and thus ensuring a simple look.

SUITABLE FOR PASSIVE HOUSE

Best value with triple glazing $U_g 0,5 U_w 0,58 W/m^2 K$. Depending on the glazing chosen, it is suitable for low energy, or passive and energy Energie-plus houses.

FIRE PROTECTION

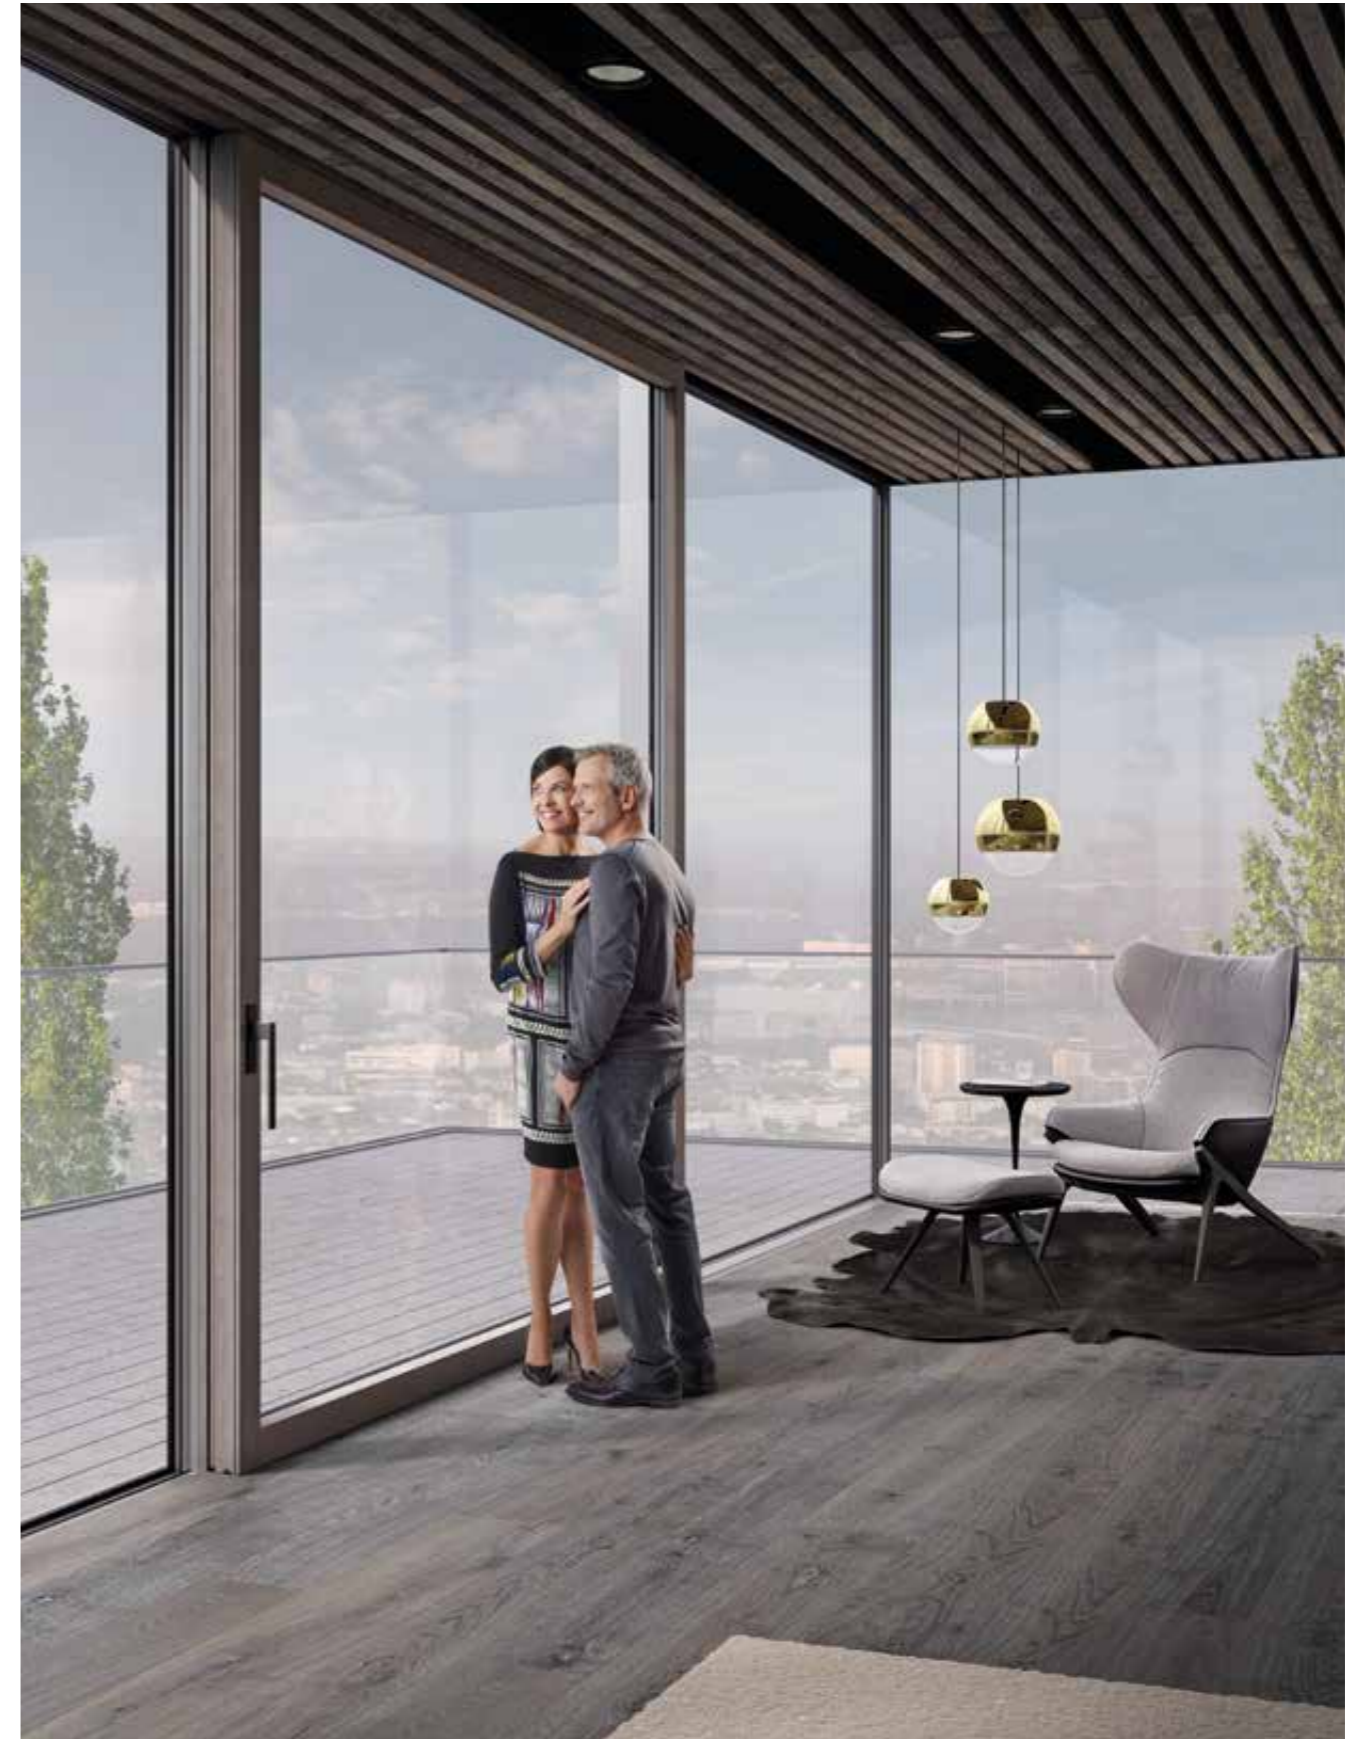

Fixed unit optional certified fire protection.

LARGE DIMENSIONS
fixed unit possible up to a maximum height of 4.5 m.

reddot design award
winner 2009

Only FixFrame is visually completely frameless and, thanks to the built-in parts that can be integrated, it is a harmonious, flush whole. Glass elements, windows, patio doors, sliding and entrance doors as well as sun shade can be integrated into the FixFrame series frame.

We understand an all-glass system when various elements such as windows, patio doors, sliding doors and Fixed Parts come together to form an visual whole and give you even more light and space. But the Nevos Alu entrance door can also be coupled with Platin Blue Fixed Parts.

Platin Blue

WOOD/ALU ALL-GLASS SYSTEM

SLIM GLASS ARCHITECTURE FOR OPEN, BRIGHT LIVING.

Our second all-glass system: Platin Blue. Impressively slim frames – aluminium on the outside, wood on the inside – enhance modern-. With an equally attractive price-performance ratio. Platin Blue comes ready to be coupled – which makes processing and installation pleasantly easy and equally interesting for new buildings and renovations.

Style-lovers can choose from a seamless connection with all-glass joints, classic wooden frames or slim aluminium profiles. The Platin Blue range features many ready-to-fit elements (Platin window, Platin Plus, Platin Blue lift-and-slide door, Platin patio door and Nevos Alu SET entrance door).

MANY INNOVATIVE ADVANTAGES:

CONNECTION WITH GLASS JOINTS

The connection of the fixed parts with only glass joints, which can run along the long side or around the corner is a high-end solution. Optionally with aluminium cover or high-quality enamel edge in black.

CONNECTION WITH STATIC PILASTER

With only 25 mm face width and 66 mm in depth, the screwed static pilasters ensure stable connections between the individual fixed parts. This is ensured by a steel tube inside that is sheathed on the outside – powder-coated or in genuine wood veneer.

VERY SLIM FRAMES

This ensures maximum glazing, transparency and light – with optimal thermal insulation.

FLUSH-FITTING, SLIM COMPONENTS

The special feature and the beauty of your all-glass systems are consists in that the windows and terrace doors are flush-mounted connected to the fixed glass elements.

BARRIER-FREE

The barrier-free floor threshold without tripping hazard can be combined with insect screen-sliding frames upon request.

NEW! Available in many different colours.

EASY TO REPAIR

If the glass is broken, it can be easily replaced from the outside.

SIMPLE FRAME DESIGN

Beauty is what you don't see - such as glazing beads and joints. The slim elevation with slanted frame also favours light incidence and solar energy production.

Safir

PVC/ALUMINIUM
OUTSIDE AND INSIDE FLUSH AND SLIM

Design line
Modern

PERFECTLY SHAPED
The glass-bead free sash not only looks beautiful, it is also effortless to keep clean.

MORE LIGHT
Thanks to the bevelled shape, the frames look even slimmer and allow more light into the room. This is particularly advantageous for double or multi-sash windows.

DEMANDING DETAILS
The bevelled sash shape is a real light source and ensures a lean look. At the same time, the slope improves the air circulation and heat flow at the window and thus reduces the formation of condensation on the window.

SAFIR PURE
Best value:
 $U_w 0.71 \text{ W/m}^2\text{K}$
System depth: 100 mm

SAFIR PLUS
Best value:
 $U_w 0.67 \text{ W/m}^2\text{K}$
System depth: 100 mm

The ideal
combination with Platin.

FLUSH ON 3 SIDES
The Safir product line is not only flush with the glass and frame on the outside, but also flush with the frame on the inside – for an even simpler look.

EXCELLENT AND SHAPELY
Safir has been awarded the Red Dot Design Award and the German Design Award.

CONNECTION OF SEVERAL ELEMENTS
If windows are connected to one another in order to maximise the glass surface, this is usually unattractive because the frames look very bulky. Our window connections are designed in such a way that they are extremely slim and yet meet a high level of structural requirements.

TIP

When buying a window, make sure that the PVC is free of lead and cadmium. This has been the standard with us for years.

BEAUTIFUL CORNER JOINTS
Instead of the usual U-shaped, wide and angular recessed corner connection joint, our plastic windows are designed with a V-shaped and easy-to-clean designer joint.

NEW! ELEGANT WOOD OR ALUMINIUM LOOK
You can achieve a beautiful and matt look with the new "oak" and "black decoration". In addition, they are very durable and scratch-resistant.

LIFT-AND-SLIDE DOORS OF PRODUCT LINE SAFIR

SLIM GUIDE RAIL

The guide rail of our lift-and-slide door is hidden in the upper frame and does not disturb the unobstructed view in the fixed part area.

SIMPLE, GLASS-FLUSH FITTING SASH DESIGN

First time with us: modern all-glass design in less expensive PVC material.

8 ROLLERS EASY TO USE

Not the usual 4, but up to 8 guide rollers guarantee easy operation of the doors that can weigh up to 400 kg.

BARRIER-FREE

No tripping hazard and a front-mounted insectscreen can be installed if desired. Available in many different colours.

Lift&Slide door (L&S)
Safir Blue

LIFT-AND-SLIDE DOOR SAFIR BLUE

Particularly simple with modern shape language the Safir Blue creates beautiful connection to the outdoors. In addition, it is an ideal supplement to the wood/Alu lift-and-slide door Platin Blue.

TERRACE DOORS OF PRODUCT LINE SAFIR

Terrace door Safir with conventional Fixed Part

PATIO DOOR SAFIR

Flush. Slim. Stable. Warm. 4 quality properties distinguish the Safir. In addition, there is a high incidence of light due to the slanted frame shape.

Terrace door in combination with Fixed Part and extremely slim pilaster strip.

TIP

PATIO DOORS

Offer a maximum height of up to 2.70 metres

THE SLIM DESIGN

If openable windows and Fixed Parts are combined with one another and these are oversized, a screwed-on pilaster strip inside is required for the structure. Our pilaster strips are beautifully slim, but thanks to the steel core they still provide a reliable hold even with particularly high solutions.

BARRIER-FREE THRESHOLD

The Isostep threshold has an especially high heat insulation due to the GRP fibre reinforced PVC and is also designed with a high resistance to driving rain. Available in many different colours.

Safir Blue

PLASTIC/ALU ALL-GLASS SYSTEM

ELEGANT AND IMPRESSIVELY SLIM

The Safir Blue Fixed Parts together with the Safir Blue lift-and-slide door result in a contemporary all-glass system that meets all the requirements of modern living. The interior is made of cheaper plastic and is ideal for anyone looking for who are looking for a beautiful design with a good price-performance ratio.

ELEGANT AND EFFICIENT

The almost frameless look ensures bright, open rooms and satisfies all the modern architectural requirements for creating a warm and cosy atmosphere – and all this in less costly PVC material.

COMBINABLE

As with the Platin Blue wood/aluminium all-glass system, the slim frames are equipped with reassuringly weather resistant aluminium on the outside. This means that both systems can be combined in a single unit, which is not only architecturally innovative but also saves money.

EASY TO REPAIR

If the glass is broken, it can be easily replaced from the outside.

MANY INNOVATIVE ADVANTAGES:

VERY SLIM FRAMES

Now also available in PVC. This ensures maximum glazing, transparency and light, with optimum thermal insulation.

GLASS-BEAD FREE LOOK

Beauty is in what you don't see – such as glass strips and joints. The slim elevation with slanted frame also favours light incidence and solar energy production.

BARRIER-FREE

The barrier-free floor threshold without tripping hazard can be combined with insect screen-sliding frames upon request. **NEW!** Available in many different colours

GLASS-BEAD FREE LOOK

Beauty is what you don't see – such as glass strips and joints in sashes. The slim elevation with slanted frame also favours light incidence and solar energy production.

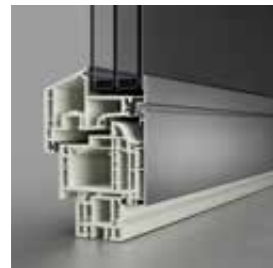

NEW! ELEGANT WOOD OR ALUMINIUM LOOK

You can achieve a beautiful and matt look with the new "oak" and "black decoration". In addition, they are very durable and scratch-resistant.

TOPAS & TOPAS PLUS

As entry-level models, even lean budgets flatter without compromising on the external appearance. An attractive design is combined with warmly recommended inner values. Above all, it has a top heat value that reduces heating bills and environmental pollution.

TOPAS

Best value:
 U_w 0.74 W/m²K
System depth: 84 mm

TOPAS PLUS

Best value:
 U_w 0.68 W/m²K
System depth: 84 mm

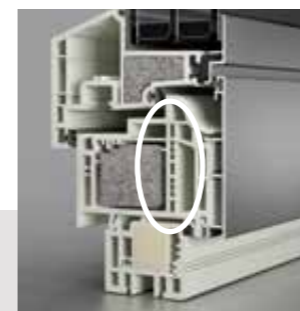

Modern in design,
lean in **budget**.

FLUSH FITTING

flush on 2 sides. Flush-fitting to glass and frame. Inside slightly rebated.

THERMALLY OPTIMISED WINDOW SILL CONNECTION

The optional thermal foam core ensures even better thermal values.

RENOVATION-FRIENDLY CONSTRUCTED

Renovations are usually major interventions in the façade of the house. Topas counteracts this, as it can be installed with a slimmer system thickness even in older houses with narrower outer walls.

PATENTED STABILITY

In addition, reinforced, patented profile structure at an affordable price.

BEAUTIFUL AND EASY TO CLEAN CORNER JOINTS

Instead of the industry-standard U-shaped, wide and angular recessed corner connection joint, our windows are designed with a V-shaped and easy-to-clean design joint.

SURPRISINGLY EASY TO CLEAN

Effortless cleaning, as all profile contours of windows are constructed for easy cleaning.

Photos: Roland Wimmer

TERRACE DOORS OF THE PRODUCT LINE TOPAS

PATIO DOOR TOPAS

Beautiful and beautifully warm. Topas is flush on the outside and lightly rebated on the inside. The window frame is also slim like the Platin and Safir, and even identical on the outside – so that Topas can be ideally combined with the wood/Alu window Platin and the plastic/Alu window Safir on a house. A combination of plastic and wood cannot be any more inexpensive.

COUPLINGS
Stable, narrow couplings and mullions paired with extremely slim pilaster strips for high structural requirements.

**BARRIER-FREE
THRESHOLD**
Thanks to the GRP fibre composite material, the patio door has particularly good thermal insulation and is designed to be highly watertight. Available in many different colours.

**NEW! PULL HANDLE
SWIVEL-MOUNTED**
Just as practical as aesthetic is our own developed, swivelling handle ZG 9. So slim and flat that it can easily fit under an insect screen-sliding frames.

Glazing bar windows

IN MODERN CONTEMPORARY LOOK

Design line
Modern

PLATIN CLASSIC
Material Wood/Alu

SAFIR CLASSIC
Material PVC/Alu

TOPAS CLASSIC
Material PVC/Alu

Contemporary design with a special classic touch: The modern window line Platin, Safir and Topas can also be designed with slim glazing bars of only 25 mm. The classic variation of the modern design line skilfully unites contemporary architecture with the longing for the down-to-earth and allure of the familiar. Ideal for current living

trends with contemporary comfort, but also for urban loft situations with particularly architectural character. Another innovation: Our modern windows are now optionally available with black PVC glazing bar spacers. These provide a reduced heat bridge compared to metal glazing bar spacers.

TIP

With glazing bar windows in modern, contemporary look, you can create many styles of living – from industrial-stylish for urban loft situations to modern country house style or Mediterranean charm. Be yourself the designer, we will provide the solution.

TIMELESS DESIGN

Those who want to live in a classic style rely on durability with comfortable, timeless look.

A STYLE OF LIVING WITH EVERLASTING VALIDITY

Is it the charm of the simplicity? Or is it the seductively new variant of an old flame? No matter why you choose the imperishable classic look – our glazing bar windows are a lifelong pleasure.

INSIDE VIEW

LEAN GLAZING BARS
25 mm slim and flush bars. Ideal for most modern demands with a desire for classic comfort.

OUTSIDE VIEW

FLAT GLAZING BARS
Flush fitting to frame and with only 9 mm glass recess optically also almost flush fitting to glass.

When natural **comfort**
moves in with
the windows.

proven for many years.

REBATED LOOK
Window frame, sash and glass
are rebated.

PROVEN ECONOMICAL
Opal impresses with its outstanding
heat value and helps to significantly
reduce heating costs. Suitable for
passive and low-energy houses at a
good price/performance ratio.

GLAZING BAR OPTIONS
For Opal, several glazing
bar options are available.
No matter if placed on the
in-or outside or in-between
panes – glazing bars create
a comfortable home.

COUPLING
Stable, narrow couplings
and mullions paired with
extremely slim pilaster strips
for high structural require-
ments.

WOOD LOOK
With a decoration in larch
look you give simple plastic
windows an individual wood
look on the inside.

**BEAUTIFUL AND EASY TO
CLEAN CORNER JOINTS**
Instead of the usual U-shaped,
wide and angular recessed
corner connection joint, our
plastic windows are designed
with a V-shaped and easy-to-
clean design joint as standard.

BARRIER-FREE
Floor-to-ceiling windows and
patio doors are exposed to
high weather conditions.
Upon request, the barrier-free
floor threshold is available in
many colours matching the
colours on the outside.

TIP

Even the Opal Alu –
as will all our window
lines – is available in all
conventional opening
types: Window, terrace
door, lift-and-slide door
and Fixed Part.

PROVEN DESIGN – REBATED LOOK
Design does not compete with time here, but is
timeless. Ideal for small budgets – without having
to forego graceful design and current living trends.

Rubin

WOOD
REBATED OUTSIDE AND INSIDE

Honest, natural,
solid wood
through and through.

REBATED LOOK

Window frame, sash and glass are rebated.

TEST PASSED WITH DISTINCTION.

The tightness test of the accredited test centre Holzforschung Austria approved best values for air- and driving rain tightness as well as wind resistance.

WINDOWS CLASSIC

GENUINE CARE

Careful workmanship for decades of durability. In the case of wooden windows, all parts are screwed together, not just plugged and glued.

BARRIER-FREE

Floor-to-ceiling windows and patio doors are exposed to high weather conditions. The barrier-free Isostep threshold does not give even large amounts of water a chance. Upon request you can select from many colours.

SIMPLE, TRADITIONAL NATURALNESS

The window sash is available in 2 widths. In order to match the architectural style with sustainable construction, the window sash can also be made even narrower if desired.

SLIM WOODEN RUNGS

The new rung, which is only 25 mm slim, looks classic and modern at the same time. Wooden glazing bars are screwed to the frame and the glass beads. Also available in 30 mm and 44 mm.

BRUSHED WOOD LOOKS MORE NATURAL

Soft parts of the wood are brushed off. Harder parts like annual rings remain and are highlighted. This makes the wood more resistant.

TIP

ORIGIN OF THE WOOD

Paying attention to the origin of wood! We refrain 100% from using cheaper, Siberian larch with uncertain sustainability.

RESOURCE SAVING ARCHITECTURE

Ecological living and design claim. You think that combining both is impossible? It is not. Thanks to the Rubin product line the genuine wooden window, that is available in many colours, oiled and glazed.

SECURITY SYSTEMS FROM JOSKO

Security is one of the basic human needs. Security creates a home in which you can feel comfortable. Our entrance doors offer very good basic burglary protection even in the standard version, which meets this need.

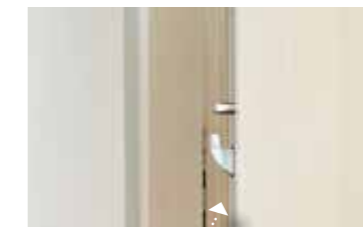

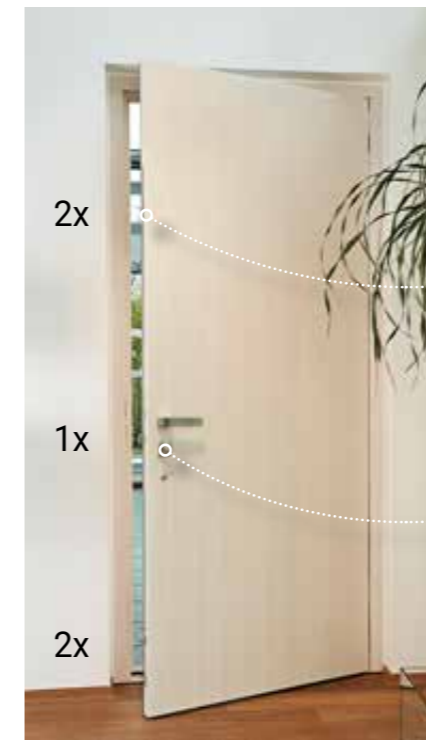

In many cases, the same components are used as are used in burglar-resistant entrance doors that have been tested and certified according to Resistance Class 2 (RC2).

HIGH QUALITY SECURITY CYLINDER AS STANDARD

We use a high-quality security cylinder on all entrance doors that combines many advantages: It can be locked on both sides, even if a key is inside, the same key for entrance and side entrance doors at no price, five keys per cylinder, which can only be reproduced with a security card, and an integrated core puller that prevents the cylinder core from being pulled out in the event of a break-in attempt.

PUT A STOP TO BURGLARIES WITH RC2 SECURED ENTRANCE DOORS

The Resistance Class (RC) describes how high is the resistance of a door element in an attempted break-in according to ÖNORM B 5338 or DIN EN 1627. Our entrance doors can be made of RC2 for a surcharge. A special door door and panel structure, reinforced hinge and strike plate mounting, RC2 core pulling protection and surcharges glass ensure increased resistance. The RC2 protection is certified by the independent testing institute Holzforschung Austria.

Pinbolts and hook bolts

Pinbolts and hook bolts make it difficult to lever out and push the frame and sash apart.

The lock-latch and the bolt made of solid steel are secured with the maximum access depth.

FIVE TIMES SAFER. STANDARD LOCK FOR YOUR ENTRANCE DOOR

Two are better than one, or in the case of our entrance doors: Holds 5 times better. Just like a safe, the door is locked at five points. Twice above and twice below, pinbolts and hook bolts secure the frame and sash against levering out and being pushed apart. The middle of the door is secured by a lock latch and a bolt made of solid steel with maximum access depth.

ENTRANCE DOORS WITH SIDE ELEMENT

OUTSIDE AND INSIDE

OUTSIDE VIEW

VARIETY OF MATERIALS

No matter which material you prefer for your entrance doors, whether wood, aluminium or a combination of wood and aluminium: With us you will find the door that suits your needs and your installation situation.

BARRIER-FREE

20 mm height as standard with very good thermal separation. The threshold is now optionally available in black anodized for a particularly elegant look on dark doors.

CLOSE GENTLY, OPEN EASILY

The standard soft lock-latch, with which our entrance doors can be gently closed and opened easily, ensures extra convenience.

SAN.FRAN 1 Nevos Alu – SET
Knotted oak N06 silver grey brushed
Alu Effekt 3

TWO VERSIONS

Flush-fitting and unrebeated fitting (right image) or classically rebeated door leaf (top Fig.). With many of our doors you have a choice.

NICE AND EASY TO CLEAN

Many design and functional elements are incorporated into the frame or the door leaf in such a way that they are flush-fitting and are therefore particularly elegant and easy to clean.

INSIDE VIEW

CHOICE OF HINGES

Depending on the system, we offer you either concealed (left Fig.) or visible hinges (top Fig.).

BEST VALUE THANKS TO TRIPLE GLAZING

The standard triple glasses for glass sections ensure the best heat values.

VARIETY OF DESIGNS

Our entrance door models are available in many different types and styles of wood. With the option of oil colours, lacquered and glazed surfaces, there are an infinite number of design variants.

Oak wavy N07 nature

SECURITY AND WARMTH
The solid door leaf construction makes the door stable and ensures good thermal and sound insulation values.

TIP

LARGE DIMENSIONS
Door heights of up to 2.6 m are possible, with a top panel even up to 3.88 m.

IN LOVE WITH LIGHT
Side elements made of glass provide natural light in the entrance area. On request, the glass can be satin finished, partially satin-finished or tinted so that curious glances remain outside.

THE NEVOS DOOR

Nevos entrance doors consist of a wood composite panel (HPL), which provides unique heat values and offers all surface options. In the SET version, the door leaf is flush with the frame and thus forms the basic system for modern, flat entrance doors in line with current architectural trends.

On the inside, the Nevos doors can be painted or executed with wooden surfaces.

NEVOS ALU
Robust outside, cosy inside.
An aluminium cover protects the door against wind and weather, cosy wooden surfaces or HPL panels in trendy colours make it a design highlight inside.

NEVOS NATUR
Naturalness through and through.
The visible surfaces of the door are made of genuine wood, both inside and out. You can choose from many types of wood and characteristics.

NEVOS COLOUR
Strong and versatile.
The resistant HPL (High Pressure Laminate) panels can be painted inside and outside in many colours. If required, an aluminium cover can also be attached to the outside.

NEVOS GLASS
Award-winning high-end glass design. High-gloss glass surfaces ensure an avantgarde design on the outside. Inside, comfort is created through wooden surfaces or trendy lacquered colour shades.

THE BEST VALUES THE NEVOS DOOR AT A GLANCE

U_d-value: up to 0.61 W/m²K*
This value shows you how much heat is lost through the door.
For comparison: Conventional aluminium doors have a value of 1.5 W/m²K

U_g-value: up to 0.5 W/m²K*
This value indicates how much heat is lost through the glass of your door. As with the U_d value, the lower the better.

R_w-value: up to 37 dB*
This value indicates the sound insulation of your door. The following applies here: the higher the better.

* Depending on model

EXCELLENT HEAT INSULATION VALUE

Low heat loss thanks to the high insulation values of the natural material wood.

TRADITIONAL AND TIMELESS

Classic rebated design in frame construction. The perfect complement to classic window lines.

TIP

MORE LIGHT, MORE LIFE

Entrance doors with large glass sections allow a clear view outside and bring light into the entrance area of your house.

SUSTAINABILITY

The wood for our Vitas doors comes exclusively from certified, sustainably managed forests.

112

113

THE VITAS DOOR

Traditional frame construction made of specially glued solid wood. Typical for Vitas are panels, glass panels, round arches and traditional, hand-crafted features that define this rebated entrance door system as a timeless classic.

They are available in plain wood door, but also with Alu on the outside.

VITAS ALU F

Flush-fitting on the outside, rebated on the inside.

The Alu F model combines the flush-mounted exterior look of Nevos Alu with the interior look of Vitas on request.

VITAS ALU

Robust outside, warm inside.

Solid wood on the inside and a robust aluminium cover on the outside ensure the best heat values and weather resistance. Inside, you can choose between wood and lacquered trendy colours.

VITAS

Natural through and through.

The solid wooden entrance door impresses above all with its natural look. The natural material allows for a wide range of door designs.

TIP

Our entrance doors are available in many lacquered, glazed, oiled and hand-oiled wood colour shades.

LIVING NATURALLY WITH THE CLASSIC ENTRANCE DOORS FROM JOSKO.

Wood is an evergreen. Whenever classical design is desired, wood plays a part. The precious natural material still delights its fans. Wood's warm radiance: wood is a classic. It stands the test of time. In terms of trends and functionality.

The models of the entrance door series Vitas, Vitas Alu and Vitas Alu F combine the best of nature with modern technology. Precious natural design inside and protective, weather-resistant aluminium outside.

JOSKO INTERIOR DOORS IN 3 DESIGN LINES

AVANTGARDE

FRAME SYSTEM MET | *flush-mounted*

Puristic living

On a level with the wall. This is possible because the frame can be completely plastered into the wall. Available inward and outward opening.

FRAME SYSTEM ONE | *flush-mounted*

Maximum freedom in choice of material

Frame and door leaf are flush-mounted. For the first time you can choose the frame from different materials: Wood, glass, concrete look, steel and aluminium.

MODERN

FRAME SYSTEM BET | *flush*

Modern Flush finish.

The door leaf is flush with the surrounding frame and slightly rebated to the wall. This ensures a simple look with elegantly reduced proportions.

CLASSIC

FRAME SYSTEM VET | *rebated*

Classically timeless

With the System VET, the door leaf, surrounding frame and wall are arranged rebated to each other to ensure the proven classic look.

I love wood.

REAL WOOD VENEER

We rely on natural, real veneers and do not use wood PVC decorative films. If desired, the veneers can even come from a single tree trunk.

REAL WOOD EDGE

Patented folding edges made of solid wood protect the interior veneer doors and make them particularly durable.

ROBUST TOP LAYER

We use high-density fibreboard of particularly high quality for optimum robustness.

OIL SURFACE

The wood remains porous and reacts to the humidity. It therefore contributes to a healthy indoor climate and impresses with its natural grain and velvety feel.

VENEER SELECTION POSSIBLE IN THE FACTORY

Optionally, the individual choice of veneer can be made in our Koping factory. We see a surface pattern and simultaneous veneer reservation as a valuable additional offer for our customers.

FEATHER-LIGHT CLOSING

The Cludo magnetic latch lock contributes to the feeling of well-being, because it not only closes your door almost silently, but also particularly smoothly.

DESIGN VARIETY

Choose from a wide range of genuine wood veneers or trendy paint colours for your individual door. It is unique in that you can coordinate the door and the wall tone-on-tone with each other. Even for the design of the frames there are numerous options.

FEEL THE REAL THING

Our interior doors open up an extraordinary world full of new design options. When simplicity never looks monotonous, but always looks elegant and wood not only looks like wood, but is also made of wood.

SOFT CLOSE & STOP

The integrated Soft Close & Stop soft close damper, with damping function on both sides, ensures controlled opening and closing.

ECOLOGICAL INTERIOR DOOR CORE

Our interior doors with a thickness of 40 mm contain a biodegradable flax core as standard. We use high-quality and stable lightweight board for the doors with 56 mm thickness.

Aesthetic naturalness

INTERIOR DOORS BY JOSKO. AS BEAUTIFUL AS DESIGNER FURNITURE.

We are also following the trend towards more simple look for our interior doors and present the wall-flush mounted frame system MET. The centrepiece of this door system is a special aluminium frame that can be plastered over or painted in the same colour as the wall to make it "invisible". The door leaf is completely flush-mounted with the wall and can, upon request, or can even be painted tone-on-tone with the wall paint.

Architect Tomáš Hruška, photo: Andreas Hofer

THERE IS A LOT MORE TO WHITE THAN YOU THINK.

Spruce RAL 9016 white

Wild oak N09 white heaven

Larch N333 scandic white

WHITE IS AN INSPIRING WORLD FULL OF NEW LIVING IDEAS.

We love wood. That is why our interior doors are also made of wood. Upon request, we also offer high-quality, high-density fibre boards in white finish for the lean budgets. But wood remains wood. You can choose between high-quality, high-density fibre board in white finish or white-lacquered beech. Other rock-solid woods such as spruce

or ash are also used with our lacquered white interior doors. And since wood is often too beautiful to hide its surface, with us you can also choose oiled white tones such as White Heaven, White Pearl or Scandic White, which combine the colour white with beautiful real wood structures.

NON-STOP AND HALFWAY – Oak wavy N07 nature

NEW!
**FULL-SURFACE
 DOORS WITH
 RECESSED GRIP**

Focus on the essential: The floor-to-ceiling and full-surface doors merge visually with the wall and come without any protruding handles. Instead we mill the discrete recessed grip. Thanks to our innovative magnet lock you can slide the door comfortably and silently into the lock.

The uncompromisingly symmetrical window ONE App complements the puristic Look thanks to its extremely slim frame. More information available at josko.com

Focus on the essential

INVISIBLE FRAMES

In the variant MET 56, the frames completely disappear in the masonry, only the door leaf is visible.

RECESSED GRIP

Sometimes a door handle disturbs the look. That is why we have replaced them with a precise and discrete recessed grip.

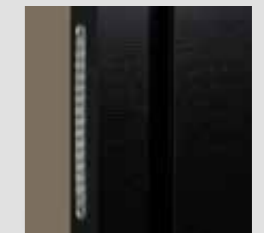

OAK WAVY

The oak is lively and modern when it is cut along the annual rings and showcasing its individual growth pattern.

This concerns all genuine wood veneers and colours.

**KEEP CLOSED
 LOCKING MAGNET**

With our new locking magnet "Keep Closed" the doors can be opened and closed with minimum ergonomic effort, thanks to the magnets in the door leaf and Alu frames.

PUSH LOCK LOCKING MECHANISM

We have developed a concealed sliding bolt with "Push-Lock" so that you can lock your door.

SIGTUNA – Sage
 Pure harmony: Doors and wall merge seamlessly, because the Model "Sigtuna" is built in the flush-mounted MET frames – only the door leaf is visible. For the largest possible uniformity the doors are lacquered in the colour of the walls.

NEW!
DOORS IN MILLED DESIGN

With their discrete milling our doors fit particularly well with modern Cottage Style. Their groove structure forms a clear patten and thus sets an exciting accent to your interiors. The their monochromatic look, the milling doors remain reservedly beautiful – specially with they are painted in the colour of the wall.

FLUSH-MOUNTED DOOR MET

PURISTIC LIVING

MET is a door system that has been consistently designed according to a minimalist design philosophy, for absolute flush with the wall and a impressively simple look. Of course, the flush-fitting fanlights for MET are no exception.

Elegant minimalism

OPEN FOR A NEW
SENSE OF SPACE

NEW! MET LOFT

Clear lines, excellent design, precisely processed: The MET glass doors of our design line "Avantgarde" add a new dimension to the rooms. With their extremely slim Frames of 15 mm visible width and concealed fittings without visible locking cases, our glass doors underscore the demands of the modern architecture: Minimalism for the sophisticated.

INFO

NARROW FRAMES

The aluminium frame of our MET Loft is only 15 mm wide.

SINGAPUR – Medium bronze
Perfectly shaped Glass doors in minimalistic elegance

COVENT GARDEN – Black
Glass doors with glazing bars in cool industrial look

FREEDOM OF DESIGN

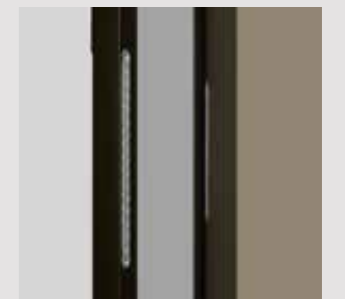

Eight turn and slide door models offer unlimited design in terms of size and colour. With and without glazing bars. Unlike the market standard steel constructions, our profiles are made of high-quality and easy to clean aluminium.

Sliding doors are the Joker when it comes to interiors. With them you can save on valuable space, because they don't protrude into space.

Shell handle Tiny
Our specially developed handle closes almost invisibly flushed to the door. Available in matt black.

Keep closed locking magnet
With our new "Keep Closed" the doors can be opened and closed with minimal effort, thanks to the magnets in the door leaf and Alu frames.

Natural woodfloors

Quality you can see and feel.

We humans are more sensual than we think. And more sensitive than we imagine. Our inner balance is an reflection of our outer living environment and vice versa. A grounded person is someone who is good at life on both feet. If both partners do this in a partnership, like Josko and the wooden floor manufacturer Trapa, then something special emerges from the this partnership.

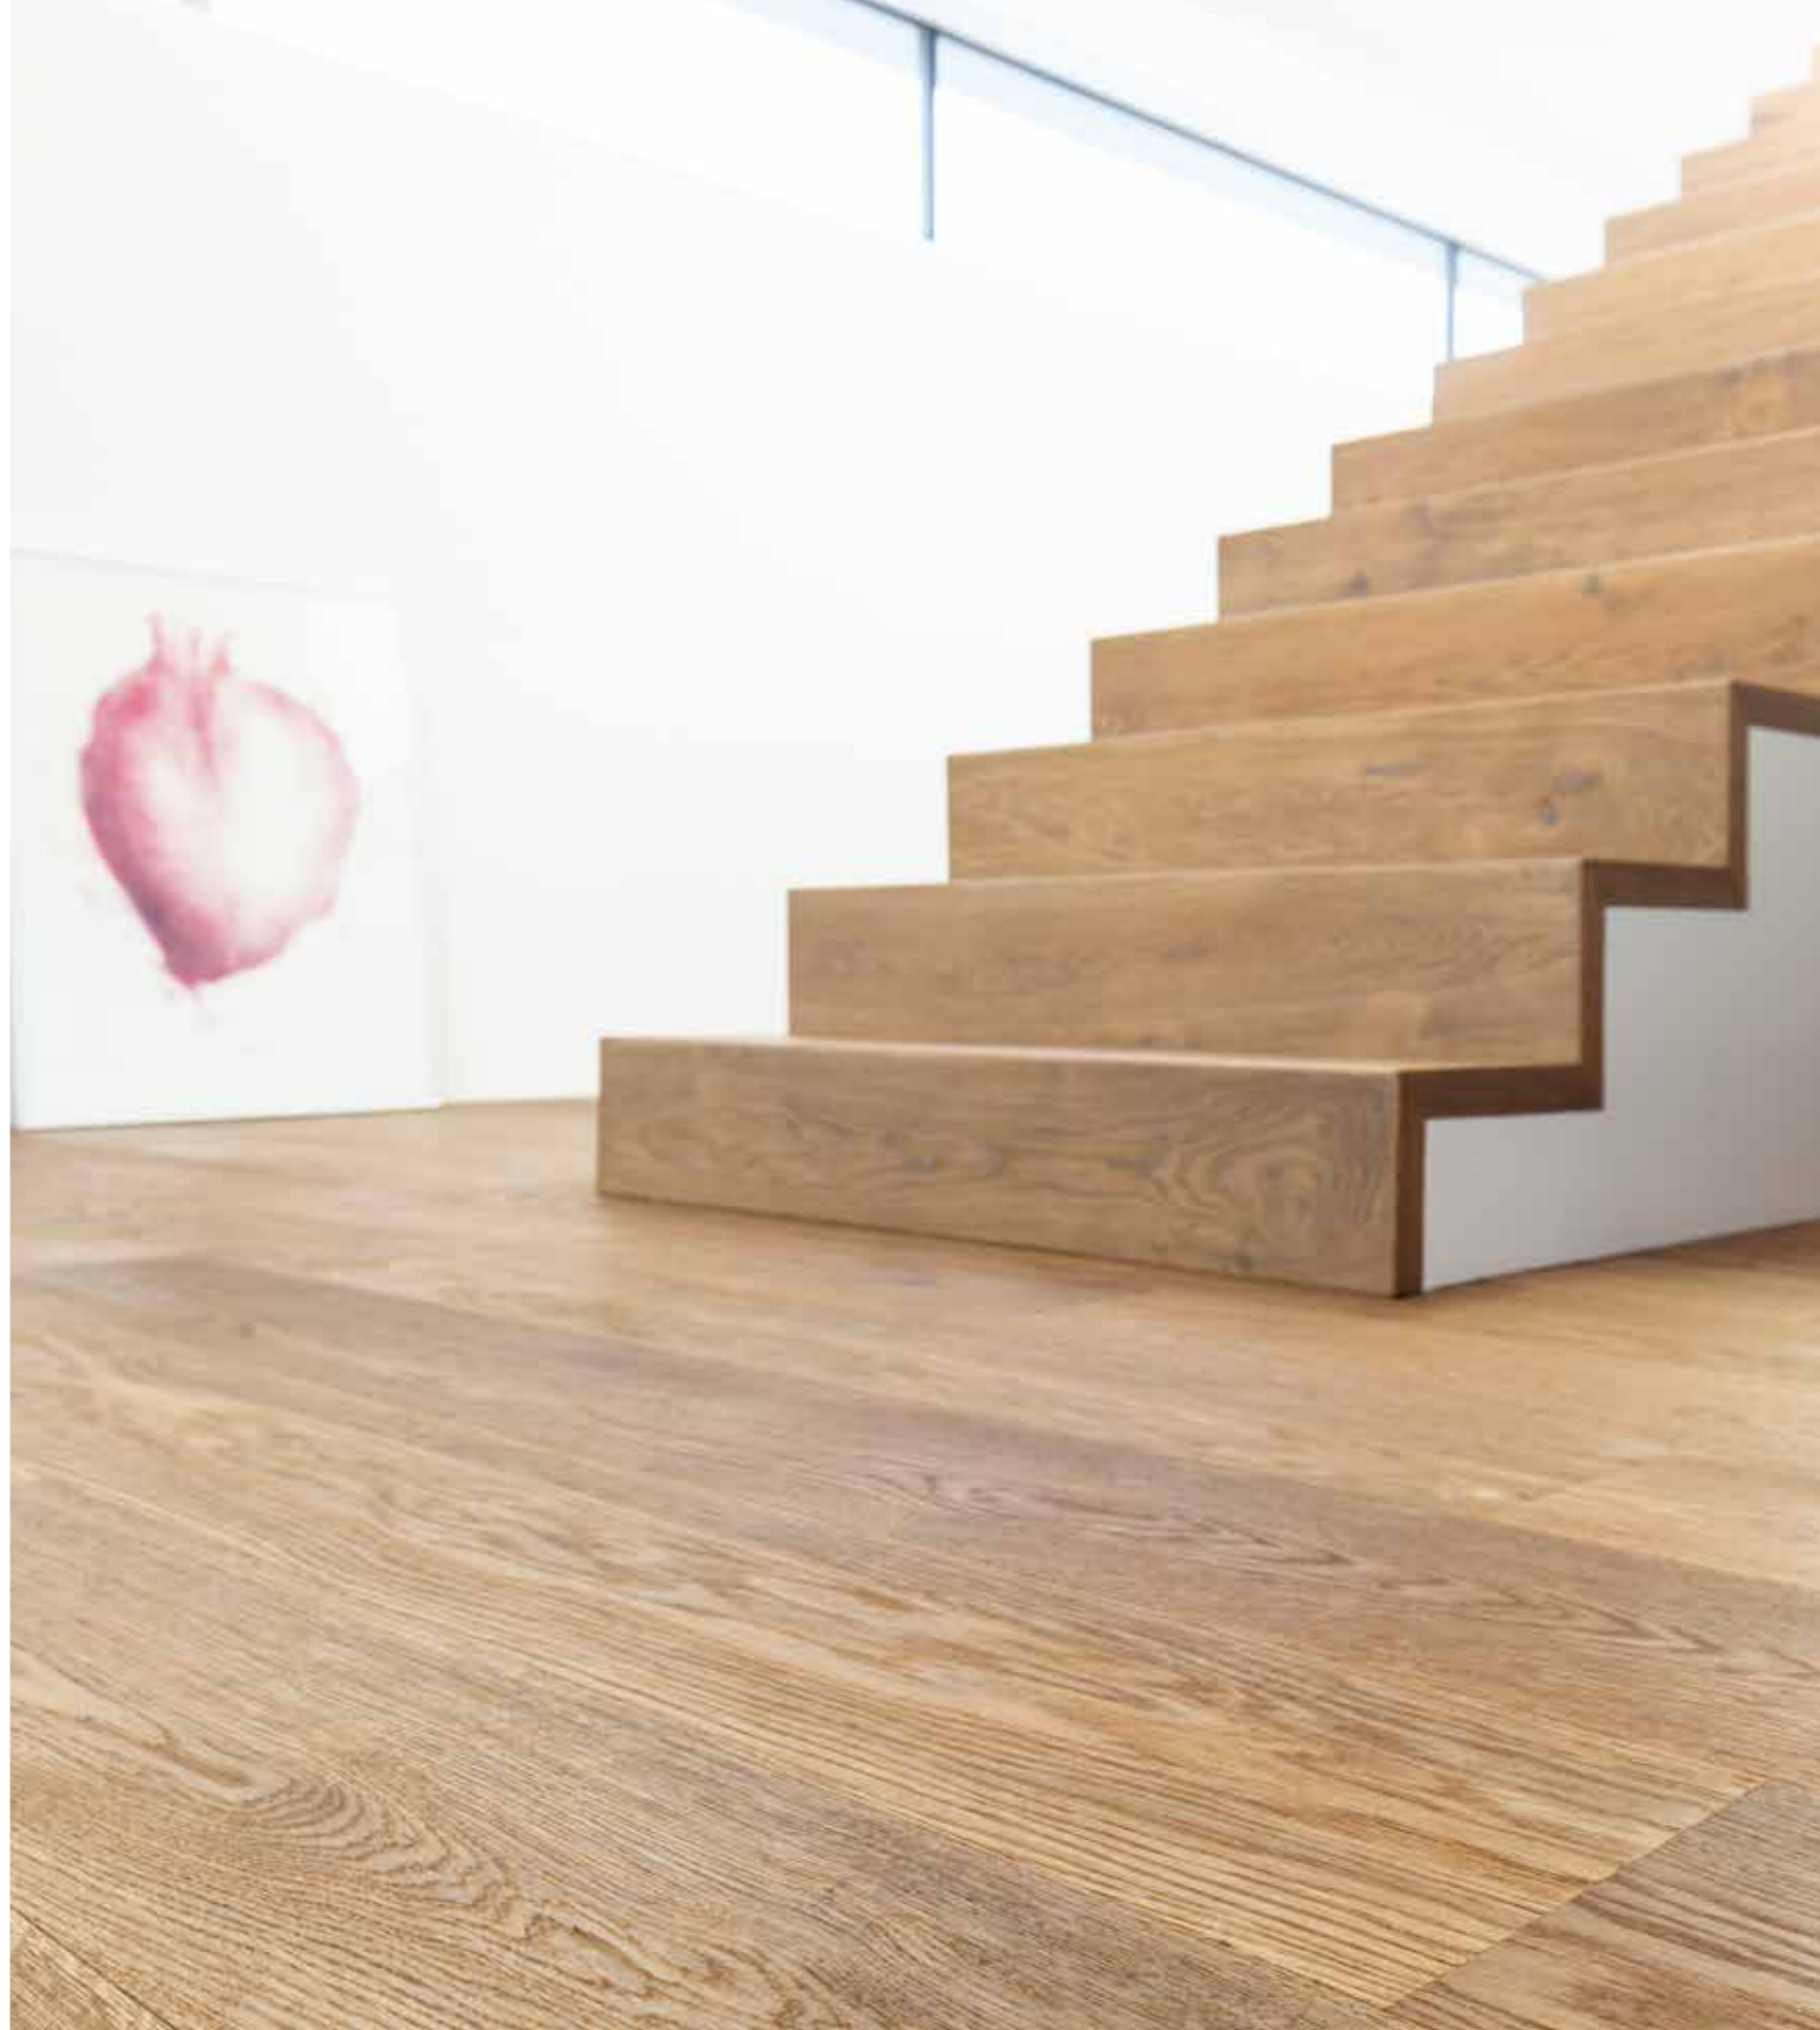

A whole collection of high-quality wooden floors has been created, which the quality producer Trapa produces exclusively for Josko. Four types of wood (oak, bog-look oak, terra oak and larch) from sustainable and regional forestry. Five plank collections (classic, premium, storico, emotion and compact) in the calm, knotty, natural and wild knotty. Ten exquisite shades. The collection completes the Josko Smart Mix philosophy, which makes the complete ambience possible for holistic living harmony. Entrance doors, interior doors, windows, all glass systems, floors, connecting interior parts such as stairs, panels, skirting boards:

everything is coordinated so that the individual elements together form a coherent overall composition in your personal living space.

The wood comes exclusively from ecological forestry. The raw material is processed in St. Veit an der Glan (Carinthia), from sawn timber to ready-to-install planks of particularly high quality. In an elaborate process with three-stage drying and elaborate cutting, gluing and oiling techniques, refined nature is created as a supporting element of timeless vibrancy.

The wood treatment not only has a superficial effect, but also deep into the pore and cell system.

The depth effect ensures the particularly high quality of natural wood floors at every step: Aesthetics, dimensional stability, breathability, high impact sound insulation and resiliency, lifelong durability and easy maintenance.

Versatile, of course. The Josko natural wood floors

Experience a new quality of living: with the high-quality natural wood floors from Josko, which are manufactured according to ecological principles. Which also harmoniously match our windows and doors.

1

4 TYPES OF WOOD

- Oak:** the everlasting classic
- Bog-look oak:** with subtle colour variations
- Terra oak:** with a dark, elegant appearance
- Larch:** stripped in light colour, with a fine knotty look

2

4 SURFACE GRADES

The options range from calm to knotty and naturally knotty to wild knotty.

4

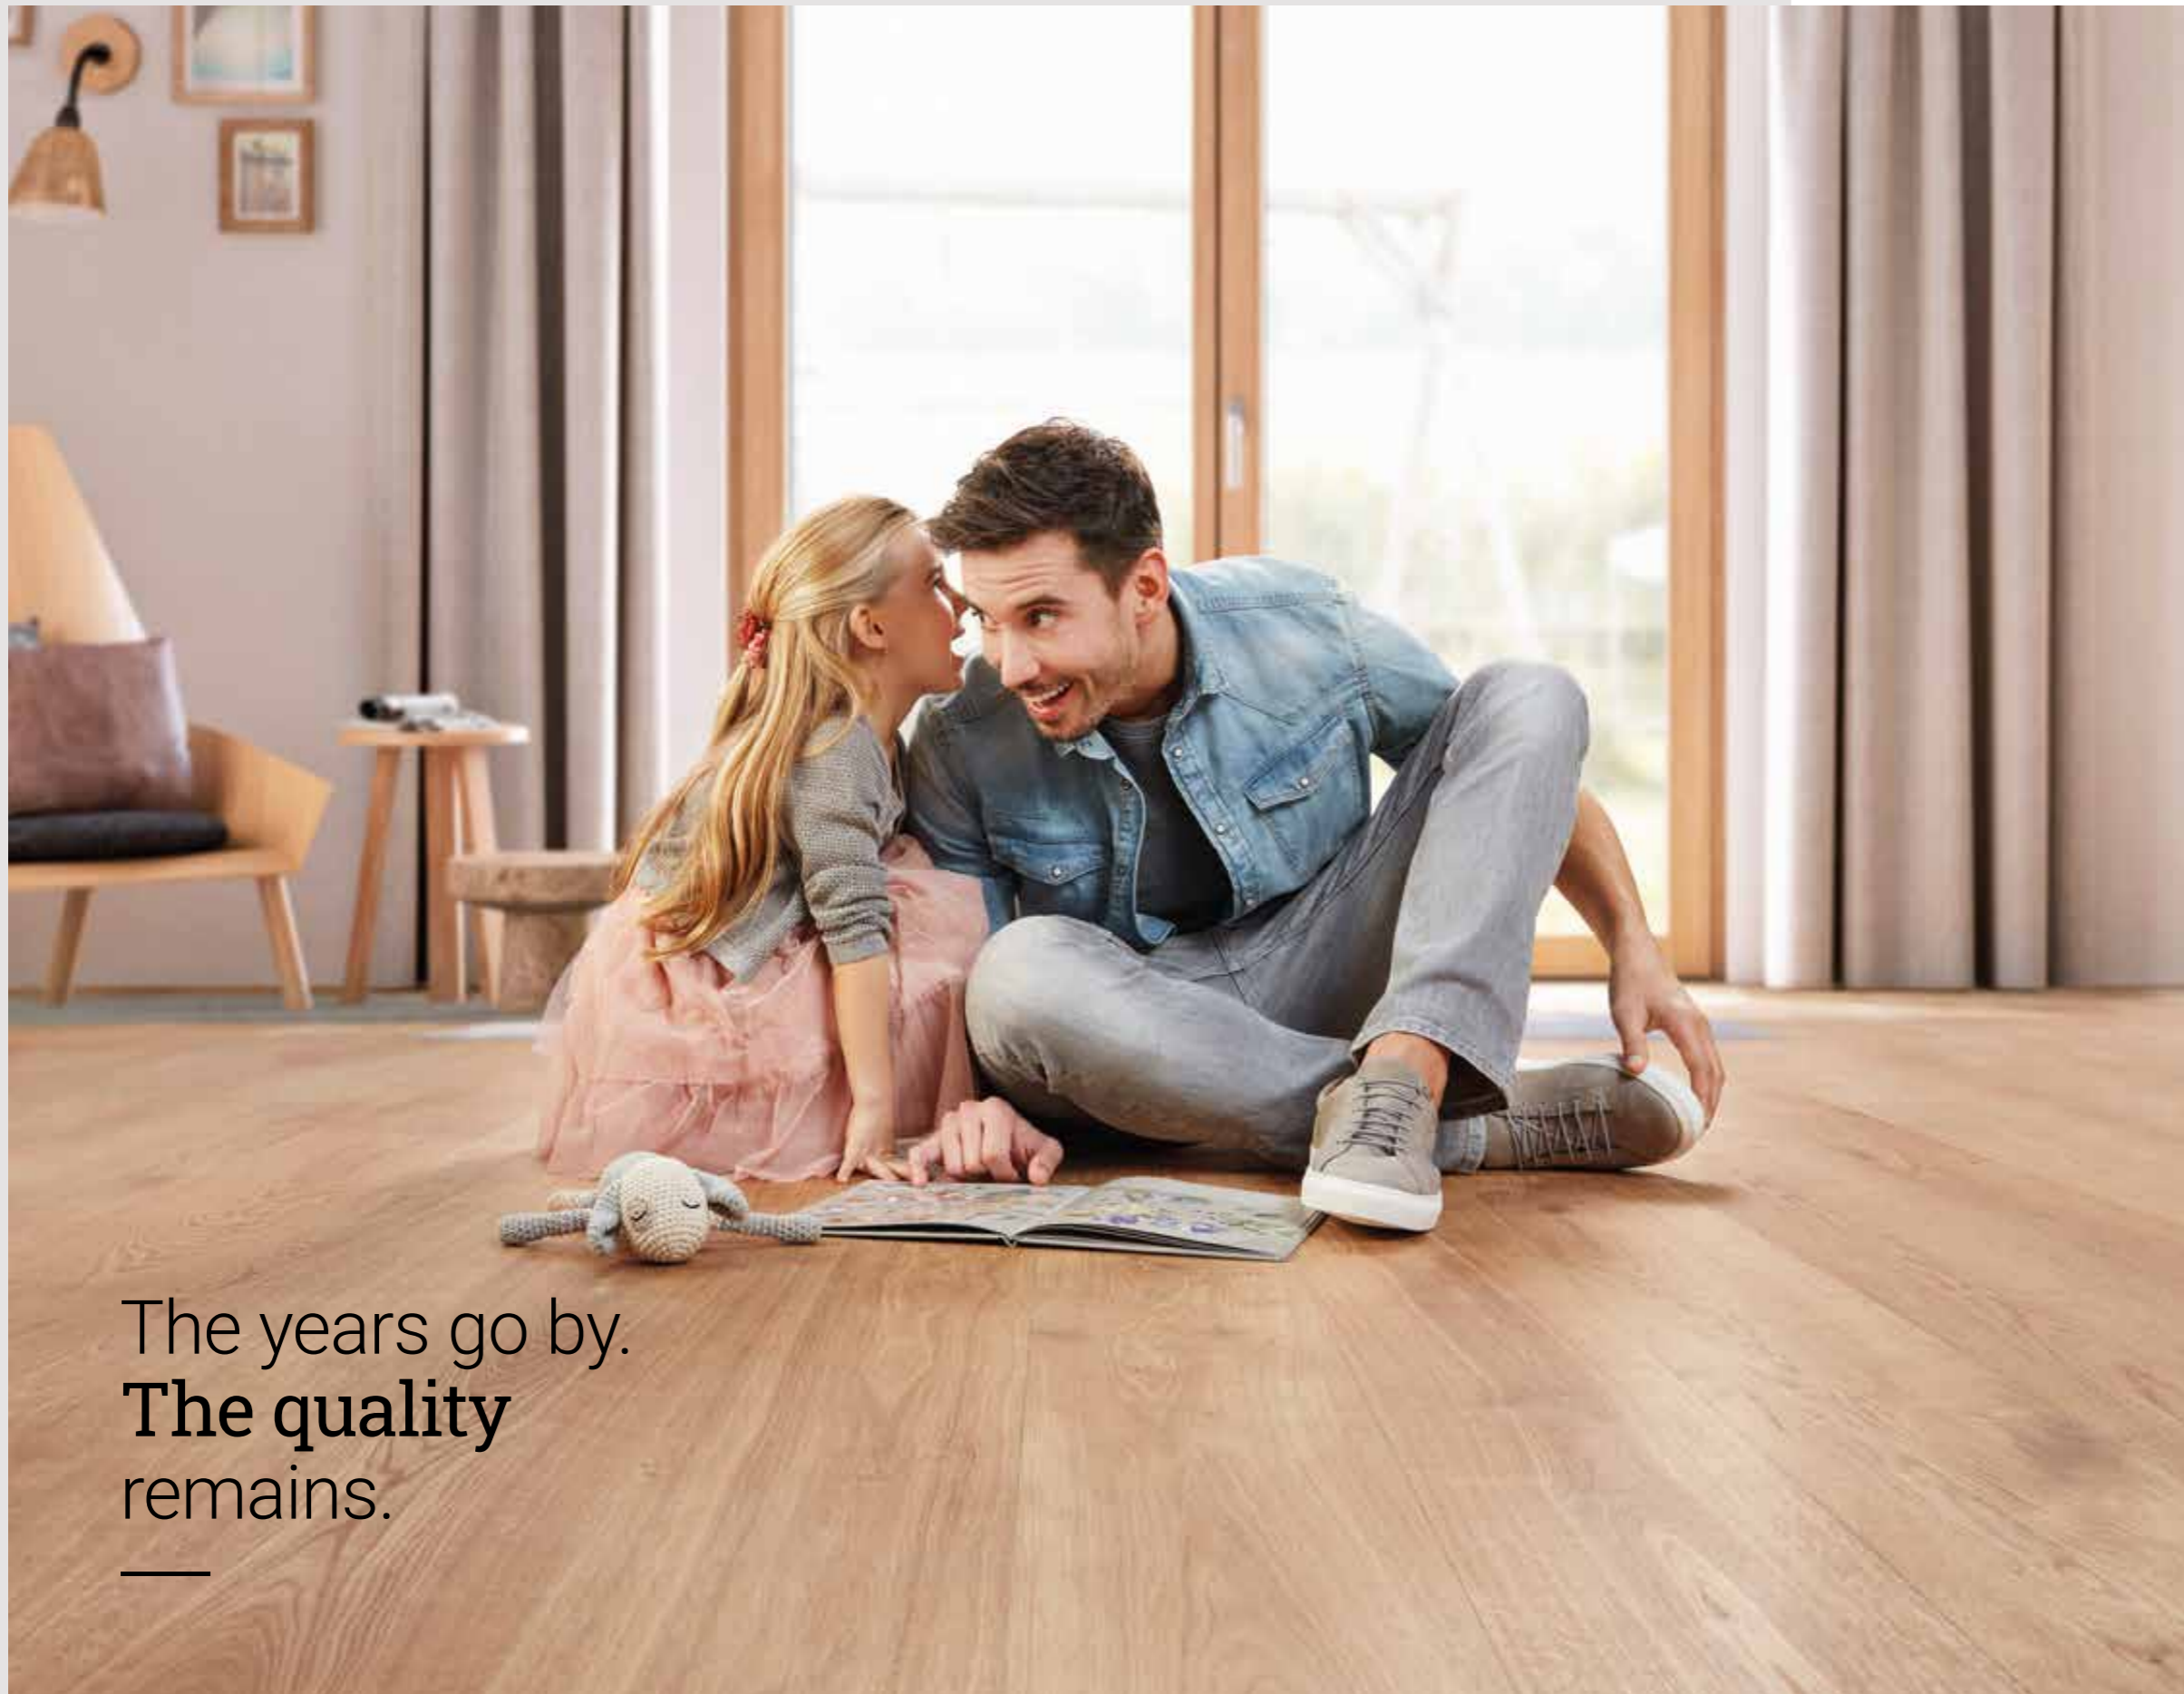

10 SHADES

from classic/traditional to modern and elegant. **Many colour shades** are exclusively coordinated with the Josko product range and work tone-on-tone with the windows and doors.

3

5 PLANK COLLECTIONS

- Compact floorboard:** economical & inexpensive
- Classic floor board:** elegant & sustainable
- Storico floor board:** with a vivid antique finish
- Premium floorboard:** for high demands
- Emotion floorboards:** tangibly soft on the feet

PRACTICAL ADVANTAGES

NATURAL LIVING

A warm and comfortable feeling, full of life and in harmony with nature – a joy for the senses

HEALTHY FROM A BUILDING BIOLOGICAL ASPECT

Free from paints and harmful substances and only treated naturally, so that the wood can breathe and have a moisture regulating effect on the room air – for a sustainably healthy living climate.

GOOD FOR YOUR CONSCIENCE

A regional, high quality product from sustainably managed forests that can be completely composted even after several generations.

MADE FOR GENERATIONS

Durable, resilient and ageless – an investment for life.

CLIMATE-RESILIENT AND NON-DISTORTING

Ideally suited for underfloor heating and – with the Premium and Emotion floorboards – also for controlled ventilation system

SURPRISINGLY EASY TO CLEAN

Vacuuming and occasional wiping – preferably with wood-floor soap – are sufficient. The natural coconut and soy oil of the soap act as a gentle care.

IDEAL FOR ALLERGY SUFFERERS

Resistant against dirt and hygienic due to a natural deep treatment. Free from electrostatic charging and easy to clean

SMART MIX – HARMONIOUSLY COORDINATED

tone on tone with windows and doors and, if required, with skirting boards, stairs and steps.

The years go by.
The quality
remains.
